

Mobile Site

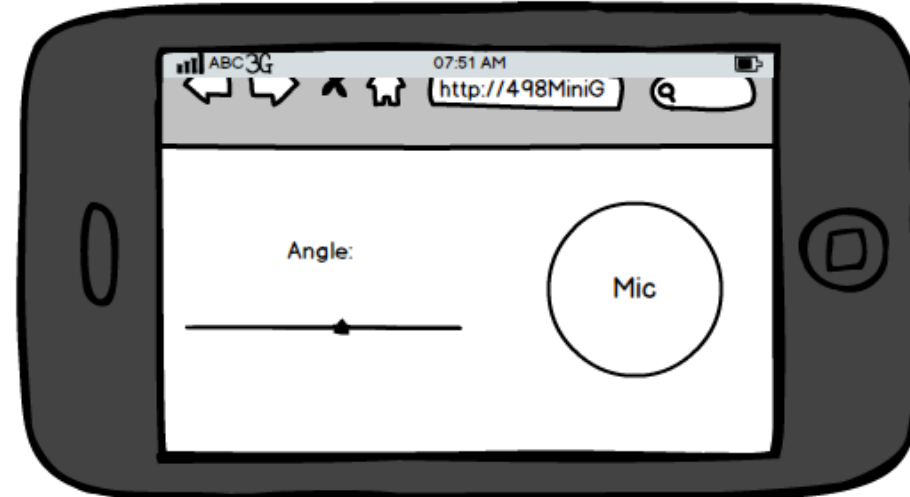

Standard controls with d-pad and 2 buttons

Controls using accelerometer (like the World Wide Maze game)

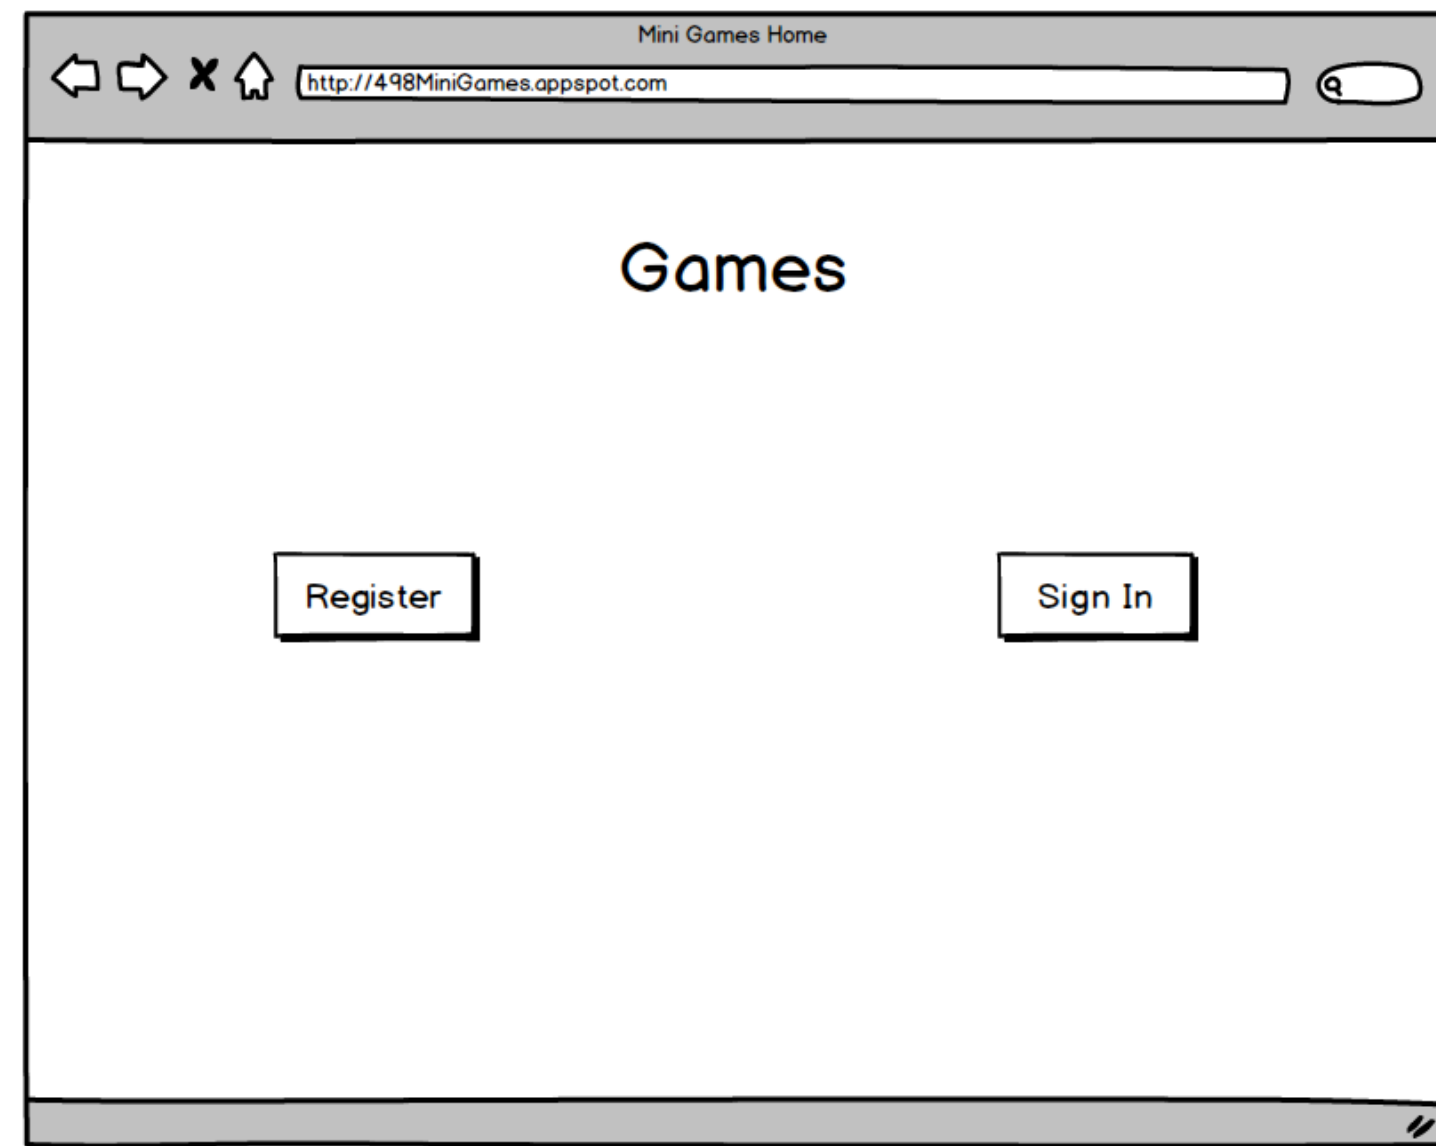

For a game where you might use the Mic

Some possible layouts

Desktop Browser

Sign in and registration page looks the same as the mobile (except maybe bigger fonts). The rest of the transitions are also the same except that you can only create games on a desktop/laptop. The desktop/laptop browser serves as a bigger display.

An Example of how it might look like ( our games will not look this good and probably have stick figures)
